

**INCORPORATE EPEAT
REQUIREMENTS DIRECTLY
INTO NEW PRODUCT
DEVELOPMENT PROCESSES**

EcoLabels like EPEAT require a company to track and use many different sustainability criteria. With seamless PLM and ERP integration, Trayak's EcoLabel solution incorporates EPEAT requirements directly into new product development processes and makes it easy for you to design for and meet these criterias. This software solution allows companies to track and validate their product Bill of Materials against these EcoLabel requirements.

QUANTIFY IMPACTS & TRACK PROGRESS

- Seamless PLM & ERP integration provides automation in collecting and grading your BOM for the sustainability criteria.
- Provides documentation and collection of EcoLabel criteria in a central place to facilitate reviews and audits.
- Flexible, Customizable and Extendable to meet different EcoLabel requirements

ANALYSIS

Globally, various regulations are forcing manufacturers to understand and improve the environmental footprint of their products. Emerging Product Stewardship initiatives will also shift responsibility to manufacturers for environmentally safe disposal of their products.
